Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hara et al US 5,686,665.

Hara appears to show a device for measuring the equivalent of dynamic matrix sensitivity of an inertial sensor especially in the abstract and drawings thereof and the use of matrices as evident in col. 5 thereof. It differs in the details of the interferometer but such are believed a known type of interferometer and would have been obvious to have been used therein for increased accuracy. The types of motion generated and the forms of data processing claimed appear to have been obvious in view of the desire to
